

TRIMEC® ENCORE®

BROADLEAF HERBICIDE

A Trimec® herbicide alternative where 2,4-D is not an option.

Trimec® Encore® Broadleaf Herbicide provides a broad spectrum of broadleaf weed control in turf and is effective against the major lawn weeds typically treated by LCO's.

Trimec Encore provides the synergism and enhanced efficacy associated with other Trimec herbicides. This formulation provides an alternative for broadleaf weed control where treatment with a 2,4-D product is limited or restricted by state or municipal regulations.

Since Trimec Encore contains MCPA instead of 2,4-D it can be spot applied following products restricted to two broadcast applications if new weeds emerge.

Trimec Encore is labeled for use on warm- and cool-season turf grasses, including bermudagrass, bahiagrass, zoysiagrass, Kentucky bluegrass, perennial ryegrass, tall fescue and turf-type tall fescues.

Encore® and Trimec® are registered trademarks of PBI-GORDON CORPORATION.

RECOMMENDATIONS

Recommended for post-emergence broadleaf weed control in turf where an alternative to 2,4-D is needed.

ACTIVE INGREDIENTS:

MCPA, dimethylamine salt	38.68%
MCPP-p, dimethylamine salt	8.16%
Dicamba, dimethylamine salt	3.81%
Inert Ingredients	49.35%

EPA Reg. No. 2217-773
