

PONDMASTER®

AQUATIC HERBICIDE

Effective control of many aquatic weed species without interrupting use of water for irrigation and recreation.

Pondmaster® Aquatic Herbicide is a stable, non-corrosive formulation of a copper-ethylenediamine complex specifically blended for use as an aquatic herbicide. Pondmaster can be used in ponds and lakes, as well as potable water reservoirs, fresh water lakes and fish hatcheries.

Pondmaster Aquatic Herbicide provides effective control of many aquatic weed species, including American pondweed (*Potamogeton nodosus*), Hydrilla (*Hydrilla verticillata*) and Brazilian Elodea (*Egeria densa*). Pondmaster's effectiveness is based on rapid uptake into

plant tissues; applications should be made when weeds are healthy and actively growing. Necrosis should occur within five days and significant dropout can be expected within four weeks.

Pondmaster treated lakes and ponds are available immediately for irrigation of greens, tees, fairways and other fine turf sites, as well as ornamental plants. Pondmaster treated water can also be used without interruption for fishing, swimming and watering for wildlife.

Pondmaster is a registered trademark of PBI/GORDON CORPORATION.

RECOMMENDATIONS

Recommended for aquatic weed control in slow moving or quiescent bodies of water including ponds and lakes, fresh water lakes, fish hatcheries and potable water reservoirs.

ACTIVE INGREDIENT:

Copper as elemental derived from copper-ethylenediamine complex and copper sulfate pentahydrate 8%
Inert Ingredients 92%

EPA Reg. No. 67690-25-2217

PACKAGING:

Plastic U.S. gallons: 4 X 1 per case:
shipping weight 40 lbs.

- **Relatively low fish toxicity**
- **Effective control of many aquatic weed species**
- **Keeps water available for irrigation and recreational uses**
- **Most effective copper formulation for hydrilla control**
- **Chemically stable during storage**
- **Liquid formulation for ease of application**
