

SuperBrush™

KILLER

GORDON'S
AGRICULTURAL PRODUCTS

The most economical effective control available for cedar, oak, hickory, locust, buckbrush, poison oak and poison ivy, sassafras, honeysuckle, thistles, kochia, kudzu, and many other trees, vines and broadleaf weeds.

Combines superior brush control with flexibility in application methods and schedules in a concentrated formulation for large brush control jobs.

SuperBrush Killer is a concentrated low-volatile ester formulation which gives you an economical brush control anytime of the year. Foliar, basal bark, cut stump, and frill applications offer four options for use throughout the year. SuperBrush provides efficient and dependable brush and broadleaf weed control in fencelines, along roadsides, in firebreaks, and around farmstead buildings.

Most cool-season grasses are tolerant to applications of SuperBrush when mixed with water for foliar treatments, so unlike mechanical brush removal methods

and chemical sterilants, treated areas are not stripped of erosion protection.

Yet SuperBrush is super tough on your worst brush problems. A concentrated low-volatile ester formulation containing a Trimec® herbicide complex for synergistic activity among active ingredients and maximum penetration into plant tissue for root kill.

And SuperBrush, like all Trimec® formulations, breaks down rapidly in the soil making it a sound choice for brush control that is not only efficient, but cost effective as well.

- A low-volatile ester formulation featuring the Trimec® herbicide complex of 2,4-D, 2,4-DP and dicamba
- Broad spectrum control — trees, vines and broadleaf weeds
- Effective on many tough species that resist other products
- Penetrates and translocates to kill roots and prevent resprouting

- SuperBrush mixed in water will not harm grasses
- Low odor formulation
